ePMA partnership
Reduce errors and improve patient care

RESTART
Building integrated healthcare

Remove the headache of managing multiple suppliers; improve efficiency, drug utilisation and patient safety with Restart. As a preferred partner, we seamlessly configure, install, and integrate Better's OPENeP solution with your existing PAS, EPR and other clinical and pharmacy systems.

Simpler and safer

OPENeP eases multidisciplinary coordination between doctors, pharmacists and nurses by providing doctors with safer electronic medication prescribing supported by prompt feedback from pharmacists. With the help of a clear medication overview, nursing staff no longer have to worry about the accuracy or type of medication they need to administer. In the end, everyone can benefit from the new analysis and insight-based system improvements.

Reduce duplication and wastage

With integrated decision support, allergy interactions and definitions of standard treatment OPENeP ensures faster access to the right medications and fewer prescribing errors. Moving away from paper prescribing and administration leads to less missed doses and chart rewrites, saving nurse time and improving the accuracy of discharge prescriptions. With barcode integration, we'll enhance drug utilisation, audits and ordering to manage better manage costs.

Export structured clinical data

Our ePMA partnership not only improves the administration of medicines for doctors, nurses and pharmacists at the point of care but also enables CCIOs and CIOs to track drug utilisation and efficiency. Monitor potentially adverse drug events and reduce the risk of inappropriate medication use. We can help you export structured clinical data to view dosage and regime performance as well as real-time clinical audits and customised reports.

Benefits of OPENeP & Restart

- Reduce prescribing errors
- Save time & money
- Accurate discharges
- Stock management
- Trend & analysis reports
- Define custom warnings
- Intuitive user interface
- Comprehensive training
- 24/7 support

Stability and performance

Our experience across all major integration engines, healthcare message formats, standards and protocols, means we streamline the addition of OPENeP to your existing integration environment. Our integration architects understand your requirements and configure your solution to act as a coherent whole. From straightforward connections to multidirectional information flows, we improve data quality and maximise performance along the way.

OPENeP key features

- Clinical decision support
- Prepared order sets
- Medicine reconciliation
- Advanced pharmacist review
- Antimicrobial stewardship
- Built in paracetemol rule
- Titration support
- Mental health scenarios
